

WHAT WE DO

LinRich Solutions provides engineering expertise for companies that are active in ultra/deepwater regions globally as well as those companies facing unique pressure control issues offshore. Our technical team is comprised of experts in BOP and pressure control systems integration. Our core focus is on circumstances where there are issues or challenges related to compatibility, fitness for purpose and performance of this equipment and ancillary systems. We do root cause analytics, domestic and international regulatory compliance and best practices development. We also do implementation work with our global clients which include well owners, drilling contractors, shipyards, equipment manufacturers and service providers.

Each of these clients wrestles with their own distinct set of circumstances and challenges, so the role that we play in support of their deepwater activities is unique to each.

Our global clients consider our practical guidance critical to their success. Our well-proven solutions ensure that wells are drilled safely, reliably and cost effectively while minimizing risk. The more challenging the environment and the greater the consequences of failure, the better equipped LinRich Solutions is to help our clients. We facilitate communication and collaboration between parties to ensure that objectives are met, schedules adhered to and that pressure control equipment and ancillary systems will perform as expected.

"For your most challenging deepwater pressure control equipment challenges, put LinRich Solutions to the test"
